

LISTING OF CLAIMS

1. (currently amended) A magnifier for a menu or the like, comprising:
  - (a) said magnifier and said menu or the like; ~~and~~
  - (b) said magnifier being disposed in a pocket ~~associated with~~ part of said menu or the like; and
  - (c) said magnifier is accessible through a slot defined in said menu or the like.
2. (original) A magnifier for a menu or the like, as defined in Claim 1, wherein: said pocket has an adhesive coated surface for attachment to said menu or the like.
3. (original) A magnifier for a menu or the like, as defined in Claim 1, wherein: said pocket has a tab extension and said tab extension has an adhesive coated thereon for attachment to said menu or the like.
4. (original) A magnifier for a menu or the like, as defined in Claim 1, wherein: said pocket has a tab extension with a plurality of holes punched therethrough for attachment to an existing menu or the like.
5. (original) A magnifier for a menu or the like, as defined in Claim 1, wherein: said pocket has a tab extension that can be bound into said menu or the like at the time of manufacture of said menu or the like.

6. (original) A magnifier for a menu or the like, as defined in Claim 1, wherein: said pocket has a spring clip fixedly attached thereto for the removable attachment of said pocket to said menu or the like.

7. (original) A magnifier for a menu or the like, as defined in Claim 1, wherein: said menu or the like is a check presenter and said magnifier is disposed in a pocket that is part of said check presenter.

8. (original) A magnifier for a menu or the like, as defined in Claim 7, wherein: said magnifier has a retractable cord attached to said magnifier and to said check presenter.

9. (original) A magnifier for a menu or the like, as defined in Claim 1, wherein: said magnifier is disposed in a pocket that is part of the menu or the like and a cord is attached to said magnifier and to said menu or the like.

10. (cancelled)

11. (currently amended) A pair of glasses, comprising:

- (a) two temple pieces;
- (b) said pair of glasses being divided into upper and lower lenses along an imaginary line generally disposed between said temple pieces;
- (c) said upper and lower lenses being of different optical strengths; ~~and~~
- (d) two nose pieces disposed generally centrally of said lenses and at distal edges thereof; and
- (e) said two temple pieces have two ear catches defined at upper and lower edges of distal ends thereof to partially support said pair of glasses on ears of a wearer of said pair of glasses.

12. (original) A pair of glasses, as defined in Claim 11, wherein: said upper and lower lenses have different optical strengths.

13. (original) A pair of glasses, as defined in Claim 12, wherein: one of said upper and lower lenses has a diopter strength of about 1.25 and another of said upper and lower lenses has a diopter strength of about 2.75 diopters.

14. (original) A pair of glasses, as defined in Claim 11, wherein: said upper and lower lenses are formed using standard eyeglass optics.

15. (original) A pair of glasses, as defined in Claim 11, wherein: said upper and lower lenses are formed using a fresnel lens configuration.

16. (original) A pair of glasses as defined in Claim 11, wherein: said upper and lower lenses are formed using multi-focal or progressive optics.

17. (original) A pair of glasses, as defined in Claim 11, wherein: said two temple pieces are straight.

18. (cancelled) A pair of glasses, as defined in Claim 11, wherein:

19. (original) A pair of glasses, as defined in Claim 11, wherein: said two temple pieces can be rotated 180-degrees.
